

And here we are using it for blood alcohol levels. You know when the Intoxilyzer 4011, it's the model number, first came out they found out that acetone gave a false reading of alcohol. So they came up with the 4011A, to clear that out. Now they found out something else was, I can't remember what it was, was giving a false reading, so they came out with the 4011AS. If they keep trying to screen out these things that are giving false readings on alcohol, you're getting...we're going to have so many letters it's going to be incredible, but we're still going to be convicting people under that, we're still going to be taking their licenses right away because that's, because that's the policy choice we're making at this point. I also read earlier this session, I got in one of my files that I don't know if anybody here has...is on, I think it's an ulcer medicine, it's called Tagamet, it's a, cimetidine is its generic name. That is one that will increase blood alcohol level. There's an article from the Journal of American...JAMA, whatever it is, Journal of the American Medical Association recently had that in there, that that test was showing that that's increasing blood alcohol levels. There's all sorts of things that will affect an Intoxilyzer reading. Absorption rate, elimination rate, all sorts of things that affect it. The Intoxilyzer generally comes up with a reading that's too high. I shouldn't say generally, it always does. The studies have shown that it always overstates the blood alcohol level and it has something to do again with the absorption rate of how much remains in the air within your lungs. The Intoxilyzer is simply an inaccurate test. If you notice in LB...or, excuse me, in AM3901, Senator Kristensen has eliminated the urine test from...from being used. Senator Kristensen, could I ask the reason why the urine test was eliminated?

SPEAKER BAACK: Senator Kristensen.

SENATOR KRISTENSEN: Yes, as long as you let me give a complete answer.

SENATOR LINDSAY: Sure.

SENATOR KRISTENSEN: Okay. And your question was.

SENATOR LINDSAY: Oh, you want a complete question? (Laughter.)

SENATOR KRISTENSEN: Well, preferably from you complete thoughts would be a start, then we can work up to complete questions, and
